

TECHNICAL DATA SHEET

NETBIOKEM APPLICATION SPEC SHEET

(Version 1 published March 2020)

DESCRIPTION

Netbiokem is a Ready To Use high level disinfectant that can be used as a spray, liquid / wipe or fog. The following directions are recommended guidelines. Each provider and user should assess the suitability of these to their particular requirement.

SPRAY:

Spray Netbiokem onto the surface until completely wet. Allow 5 minutes contact time for disinfection. Wipe the surface with a clean, dry lint-free cloth. For heavily soiled surfaces, a second application may be required. For food contact surfaces, rinse and dry afterwards.

LIQUID / WIPE:

Apply Netbiokem liquid onto the wipe material until wet. Wipe and leave for 5 minutes to ensure complete disinfection. Wipe the surface with a clean, dry lint-free cloth. It is recommended to also rinse and dry if the surfaces are in contact with food.

FOG:

All fog treatments must be carried out in empty premises / areas with any air conditioning and recirculation systems switched off. Ensure all external doors are closed and any internal doors and small space closures are open.

NOTE: If fogging is done manually or with operators present, wear protective safety equipment, face mask, gloves and eye protection.

Positioning of static fogging equipment or movement of portable fogging equipment must be carried out to achieve a minimum dosage rate of 8mL / m³.

APPLICATION TIME GUIDE:

The application time is determined by the spray rate of the fogging equipment, the volume of space to be covered, and the surface area that the fog is required to impact. Each application will be different, however as an estimate it is recommended to spray for approximately 1 minute for each 60m³ of volume at a spray rate of 30 litres / hour (0.5 litres / minute).

POST-TREATMENT:

Once the fogging application has finished keep the area closed for at least 30 minutes or until all mist particles have fallen on the surfaces.

Re-enter the area and restart any air circulation systems, or open external windows / doors to promote drying. There is no need to wipe after fogging.

It is advised to clean the fogging apparatus after use by operating with pure water for 1 minute.

FIRST AID:

Wash hands after use. Do not eat, drink or smoke during use. IF ON SKIN OR EYES rinse with water and contact a doctor. IF SWALLOWED do not vomit and consult a doctor immediately showing the packaging or label.
